| **Base material** | Steel |
| **Snow load** | 1,20 kN/m² |

With the EcoCover carport system, we offer a robust and economical solution for protecting vehicles, primarily in commercial parking areas and public facilities. The system impresses with its robust and durable construction. Thanks to the prefabricated components, our EcoCover is particularly quick and easy to install. The EcoCover provides reliable protection against rain, snow and UV radiation and can be flexibly adapted to the number of parking spaces required. The maximum dimensions also allow larger vehicle types to be parked underneath. The basic module with two parking spaces can be flexibly expanded into a row system by adding add-on units with two further parking spaces each. Ideal for large-area parking solutions, employee parking spaces or public parking lots. Installation is carried out using base plates for doweling. The prefabricated kit significantly shortens the assembly time so that the spaces are not blocked for long periods.

- **Galvanized steel construction with durable trapezoidal sheet metal cladding**
- **Basic module and expandable add-on units**
- **Quick assembly thanks to prefabricated kit**
- **Optimum cost efficiency**
- **Ideal protection for large-scale parking solutions**
