

Green roofs

GreenPlus Economy as a single module

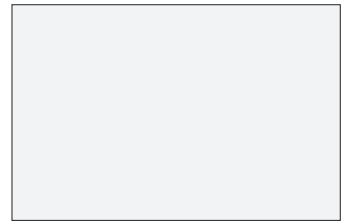

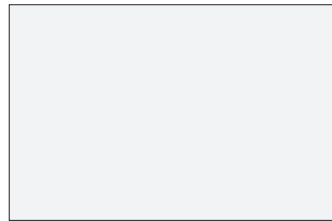

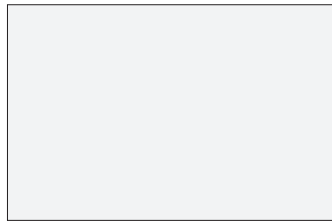

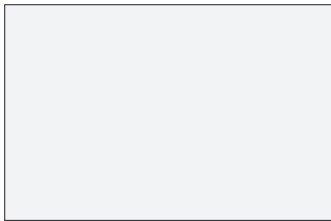

A plus for people and nature

Module tubs made of recycled HDPE, planted with up to 20 different low-maintenance sedum species.

Article number	EAN	Width	Height	Depth
102200030		400 mm	80 mm	246 mm

Planting	Sedum Plant Mix
Weight	7,00 kg
Base material	Recycled HDPE
Base area	0,11 m ²
For model	Roofing and room systems with trapezoidal sheet roofing

Our GreenPlus Economy roof system consists of modules made from recyclable HDPE material. The modules fit precisely into the trapezoidal sheet metal roofing of our room systems and canopies, eliminating the need for assembly work. They are filled with a special growing substrate that provides vegetation with the right amount of nutrients. Planted in them is a sedum plant

mix, which is easy to care for as well as winterproof and does not require additional watering, which eliminates gardening work. For cultivation, we rely on the experience of our partner companies. Green roofs offer many benefits, including noise reduction, air purification and water retention.

- + Robust planting modules made of recyclable HDPE
- + Perfectly suitable for our products with trapezoidal sheet metal profile as roof covering
- + Special nutrient-rich growing substrate
- + Pre-planted with up to 20 different sedum species
- + Maintenance required only once a year
