### A plus for people and nature

Module tubs made of recycled HDPE, planted with natural plant community.

Article number	EAN	Width	Height	Depth
102200035		400 mm	80 mm	246 mm

Planting	Sedum plant mix with flowering plants
Weight	7,00 kg
Base material	Recycled HDPE
Base area	0,11 m <sup>2</sup>
For model	Roofing and room systems with trapezoidal sheet roofing

Our GreenPlus Premium roof system consists of modules made of recyclable HDPE material. The modules fit precisely into the trapezoidal sheet metal roofing of our room systems and roofing, which means that no assembly work is required. They are filled with a special growing substrate that provides vegetation with the right amount of nutrients. The addition of flowering plants provides additional food and habitat, making this option

especially bee and insect friendly. The sedum plant mix is low maintenance as well as winterproof and does not require additional watering, eliminating gardening chores. For cultivation, we rely on the experience of our partner companies. Green roofs offer many advantages, including noise reduction, air purification and water retention.

- + Robust planting modules made of recyclable HDPE
- + Perfectly suitable for our products with trapezoidal sheet metal profile as roof covering
- + Special nutrient-rich growing medium
- + Sedum species mix with additional flowering plants
- + Maintenance required only once a year
