Colour	RAL 7016 - Anthracite grey
Material	Steel
Weight	55,00 kg
Surface finish	Galvanised and color coated
Assembly	On the floor
Locking mechanism	Push-in cylinder
Side walls	One-sided

Wherever strollers have to be parked safely for long periods of time, this box made of robust, corrosion-protected sheet steel is used. Placed directly in front of the front door, at residential complexes, day-care centres or schools, at the entrance of clinics and authorities, prams can be parked here safely and conveniently.

A standard single-lever handle cylinder lock protects against unauthorised access if required and can be operated without bending down. The modular design allows individual parts to be replaced and allows for expansion to in-line systems. The stroller box is powder-coated.

- + Robust sheet steel construction with gable roof
- + Corrosion-protected, stable value through galvanization
- + Single lever handle cylinder lock
- + Modular design for replacement and expansion
