

LED illumination for WSM notice boards

Safe, efficient and highly luminous.

Illumination for WSM showcases

To ensure that your message reaches its target at all times, many WSM showcases feature built-in LED lighting.

LED linear lamps developed by WSM are characterised by **efficient energy consumption** and a **long service life** compared to conventional lamps. For years, an exchange of bulbs is no longer necessary.

Due to the **slim design**, the lighting can also be installed in showcases with a construction depth of just 60 mm. The display case is illuminated very widely and made accessible to the observer, even in the dark.

The colour temperature of **4000 Kelvin** (neutral white) ensures **optimal readability** of the contents.

Electrical components in outdoor showcases need to be **additionally protected**. If installed correctly, the closed plastic housing of the lamp achieves a **case protection rating of IP44**. A pressure compensation membrane ensures uniform pressure inside the housing and thus prevents the ingress of water and dirt particles.

This LED lamp does not require an external power supply or additional grounding and is classified as a **Class II** electrical appliance.
